

ML2021Spring HW5 Report

<生物機電碩一> <詹閔棋>

<r09631050>

Public Score	Private Score
31.42	29.74

The methods I used to pass the strong baselines include:

1. change the encoder/decoder architecture from RNN to transformer
2. make the model deeper and wider, the original model is too easy, it is not able to have the good performance
3. train a reverse translate model
4. make a new dataset
